

Monopole Antennas *antennas*

EM-6894

Vertical Rod, 9 kHz-30 MHz, Manual Control

Electro-Metrics EM-6894 Manual Vertical (Rod) Antenna performs electric field measurements from 9 kHz to 30 MHz. A ten position rotary switch switches in the appropriate matching network for the frequency selected. The EM-6894 can be used with any equivalent 50-ohm receiver/analyzer designed and calibrated for use in a 50-ohm system. The EM-6894 Vertical Antenna uses passive circuits to transform electric field components to voltages between 9 kHz to 30 MHz.

Frequency Range (calibrated): 9kHz – 30 MHz

Connector: Type TNC, female
